The City of Cooper is working on a major water leak near SH 24 and FM 64. We are hoping to have this issue resolved before noon today. Currently the water that is off is affecting the Northwest side of town. We are having trouble locating valves that will isolate the leak. We may have to turn some valves off that could affect the Westtown area. We will be calling businesses that could be affected as soon as we know that they will be affected. We apologize for any inconvenience and please contact City Hall if you have any questions.
